Work Skills

A living record of skills I can **prove** I have — tied to real work. This is for showcasing capability when taking on a new role or project: I can point to exactly which projects demonstrate which skills.

Two linked pieces

1. **SKILLS-MATRIX.md** — the at-a-glance showcase. Every skill, its category, proficiency, when last used, and a link to the project that proves it.
2. **projects/** — one file per real piece of work (the *evidence*). Each describes the problem, my contribution, the outcome, and the skills it demonstrates.

The matrix points at projects; the projects justify the matrix. A skill should not sit above “Practiced” without a project backing it.

Proficiency scale

Level	Meaning	Evidence required
Aware	Understand the concepts; little/no hands-on	A note or course
Practiced	Used it on exercises or small tasks, often with guidance	A practice project or guided task
Proficient	Used it independently to deliver real work	At least one logged work project
Expert	Deep command; can lead, design, and teach others	Multiple projects, ownership/leadership

How I keep it updated

When I tell Claude “I did X at work using Y,” it logs the project in **projects/** and updates the skill row in the matrix (level, last-used date, evidence link).

Excel export

Skills-Matrix.xlsx is a shareable snapshot generated from the markdown. Ask Claude to regenerate it anytime the matrix changes (e.g. before an interview).
