

1 · DEEP — one line of interface, five concerns hidden

INTERFACE
requireModuleAdminAccess(
 "placements",
 "services.job_postings")

auth-guards.ts

IMPLEMENTATION
hard-admin bypass · tenant validation
user_mappings lookup · safe dot-path walk
prototype-pollution guard · 401/403 shaping

2 · SHALLOW — the interface costs about as much as the implementation

INTERFACE
handleSuccess(data)
handleError(err)

BaseService

IMPLEMENTATION
returns an object literal;
logs and re-throws

3 · INFORMATION LEAKAGE — one design decision reflected in 154 files

TODAY
1,330 hand-written organisation_id
checks across 154 files

pull complexity
downward

TARGET
BaseRepository.injectOrgScope()
adds the scope once
— 24 files adopted so far
